# In step with you

The name says it all – Aplio me is an inspiring, versatile platform that can easily adapt and grow with your clinical needs. The system's thoughtful design and customizable operation allow you to tailor Aplio me to your exact needs. Its dedicated tools and consistently high imaging performance for numerous clinical applications can give you that extra reassurance with every exam. Aplio me – a compelling solution, made for you, to help you manage your daily workload with performance, quality and ease of use.

# Meet your daily needs with comprehensive capabilities

An intuitive and versatile system, Aplio me offers exceptional quality imaging for a wide range of patients and clinical targets. Its advanced transducers and modern system architecture support multiple advanced imaging tools such as Full Focus and Ultra Wide View, making imaging more insightful and robust.

Canon's unique imaging technologies such as Precision+ and ApliPure+ can help you deliver remarkably smooth images with sharp outlines, improved uniformity and reduced clutter.

The system's Ultra Wide View function can facilitate better clinical insight immediately during the exam without sacrificing image quality or functionality.

The practical Full Focus feature provides clear, uniform images across all depths without the need for focus adjustment, so you can achieve greater uniformity with fewer adjustment steps.

Aplio me can not only help me be more efficient in my daily work, it can also contribute to providing greater confidence and peace of mind to my patients.

# Simply deliver, with tailored performance

Aplio me is a multi-purpose platform that provides consistent high quality imaging, streamlined workflow and expert tools for a wide variety of clinical specialties. The system's thoughtful design and programmable user interface make it easy to customize functions and features to meet your exact needs now and in the future.

From vascular to thyroid, from shoulder to breast imaging, Canon's PLU-805BT wideband linear transducer is a universal tool for many high-frequency applications. As needed, it can be combined with specialized transducers such as the PLU-2002BT 22 MHz hockeystick transducer for small joints or intraoperative applications.

Aplio me allows me to complete all my imaging tasks with consistently high quality, quickly and with ease.

Aplio me is a compact solution with an abundance of high-impact imaging capabilities, stretching from daily routine to advanced demands for a wide range of clinical applications. Packed with versatility, this powerhouse allows you to cover your complete spectrum of imaging needs with high levels of diagnostic reliability and economic efficiency.

# Grow in step with your needs

Along with excellent B-mode imaging, the system boasts a wide range of advanced imaging and quantification capabilities providing functional information and metrics to help you make your diagnoses even faster and more informed. Combined with tools for early detection and reliable characterization, they can help referring physicians optimize your patients' treatment plans.

Aplio's thin convex transducer with single crystal technology and optional biopsy attachment is ideally suited for intercostal scanning.

Exclusive Superb Micro-vascular Imaging (SMI) provides an unprecedented level of vascular visualization combined with high frame rates to help you increase diagnostic confidence when evaluating lesions, cysts and tumors.

With Smart 3D, you can easily acquire distinct 3D volumes in SMI mode simply using a standard linear or convex transducer.

The system's comprehensive strain elastography suite with raw data functionality assists you in localizing and assessing palpable masses with high accuracy, sensitivity and reproducibility.

Non-invasive tools can assist clinicians in the assessment of liver disease, delivering easy to understand reports in visual and quantitative formats. Combining the results of ultrasound and external examinations into a single multiparametric report can facilitate a more comprehensive understanding of the disease state.
